TOGETHER, WE'LL SAFEGUARD YOUR DIGITAL WORLD

Cybersecurity is a crowded space with thousands of solution vendors and consultants offering quick fixes. But cookie-cutter security solutions can't protect your organization long-term — you need the policies, procedures, training, and technologies that are best aligned with your unique environment and organizational objectives.

Because we know that your information security environment is as individual as a fingerprint, Secure Anchor offers customized solutions for your cybersecurity needs. Under the leadership of noted author, speaker, and trainer, Dr. Eric Cole, Secure Anchor crafts tailored strategies and makes recommendations that are prioritized and actionable.

DR. ERIC COLE
FOUNDER & CEO

OUR OFFERINGS

TRAINING

To be effective, training should be customized to the learner's role and responsibilities. We take the time to understand your learners and their current levels of security awareness and technical proficiency. Our goal is always to equip your staff with the information they need to do their jobs effectively while protecting the organization's critical assets.

As a result, we offer different types and depths of training, such as:

- Security awareness for non-technical staff — how does everyone bear responsibility for the organization's security?
- Enhanced security for cloud-based applications — address the challenges posed by the cloud and multiple integrated applications
- Transitioning from network to security operations — what do IT professionals need to know to take on security roles?
- Advanced threat hunting concepts — we'll equip your team to proactively detect intrusions
- Counter measures and incident response — we'll prepare them for breach scenarios and to mitigate damage
- Regulatory compliance — your teams will understand cyber laws and how to comply

Additionally, Secure Anchor will tailor the training to reflect the challenges of your industry and the situations that users encounter every day. No other organization provides this level of customization — so the training your learners receive is of the highest relevance to their jobs.

CONSULTING AND ADVISORY SERVICES

All the data that's valuable to your organization is on your network and in your databases. The personally identifiable information (PII) of clients and employees; your intellectual property and trade secrets; your business strategies and financial plans; even the latest unreleased episodes of your hit TV series. It's all there and waiting for the adversary who is smart enough and patient enough to get past your defenses.

That's why Secure Anchor offers a full range of cybersecurity assessments, testing, and consulting, such as:

- Full security and risk assessment — in collaboration with your team, we'll provide a complete picture of your current security posture and risk exposure
- Skills gap assessment — we'll help you determine where your team might need additional competency development to meet your security needs
- Penetration testing — we'll see whether your defenses are strong enough to keep our experts out
- Cyber security programs, policies, and procedures — we'll ensure your cybersecurity program documentation can withstand the highest scrutiny, and that the program is aligned with organizational objectives
- Threat hunting/analysis — we'll help you look for intrusions and stop them in their tracks
- Network security/architecture — our network specialists will design or redesign your network with security considerations in mind

Each of our consulting engagements includes a detailed report of our findings, along with a set of recommendations for addressing any gaps or shortcomings that we uncover. We won't just tell you what's wrong — we'll give you actionable steps for fixing it.

In a crowded field of consultants and experts, Secure Anchor takes the time to understand your cybersecurity needs and earn your trust as a partner. For more information, contact your Secure Anchor representative.

■ ABOUT SECURE ANCHOR

Secure Anchor Consulting provides high-touch cybersecurity services that help organizations prevent security breaches, detect network intrusions, and respond to advanced threats. Using a proven methodology developed by noted author, speaker, and trainer, Dr. Eric Cole, Secure Anchor's recommendations are tailored to the needs of the organization, prioritized, and actionable.
