**ACGI Software Unveils Association Anywhere® 6.0 at the ASAE Technology Conference and Expo.**

*Version 6.0 includes features for enhanced productivity and business intelligence*

COLUMBIA, MD - February 16, 2009 - ACGI Software, the trusted leader in association management software today announced the release of version 6.0 of its flagship product, Association Anywhere®. ACGI showcased the new release to association management professionals at the recent ASAE Technology Conference & Expo in Washington, DC.

In addition to the robust feature set association users are accustomed to, Association Anywhere 6.0 offers the following feature enhancements:

- A complete redesign of the user interface utilizing rich internet application (RIA) technology to greatly enhance user interaction. ACGI has incorporated new AJAX (*Asynchronous JavaScript and XML*)-based components to streamline navigation and data entry, and provide rapid access to applications and data for increased productivity. The use of this RIA technology also simplifies system administration for power users that configure Association Anywhere's modules for membership, events, accounting, product sales, self-service and applications. This enhancement cuts setup time by almost 60% which means quicker implementations and faster time to value.
- A new portal module that allows users to customize Association Anywhere's interface with relevant information they need to do their jobs efficiently. The portal includes a number of simple out-of-the box "portlets" that aggregate data from all business areas in the system and across multiple data sources. End-users can add, move and remove portlets as they wish. ACGI expects to roll out more portlets in future releases, including syndicated content from various web services. Customers can also create their own custom portlets with the product's Portlet Builder.
- An expansion of the Enhanced Reporting and Business Intelligence module, built on Business Objects XI (BOXI) technologies. New add-on components include advanced visualization, dashboarding and business performance management, allowing organizations to gain better insight into all aspects of their association's business.
- An enhanced Web services architecture with a Web Services Generator, allowing technical users to publish real-time XML feeds with simple querying techniques.
- Integration to a greater number of third-party systems and services including Microsoft Exchange, Google Maps, address verification, social networking platforms and content management. ACGI continues to work with its technology partners on

integration to reduce the manual processes users contend with daily.

"The reaction to Association Anywhere version 6.0 has been overwhelming," said Arj Devadas, VP Sales and Marketing at ACGI. "In the short time it's been available, nearly half our customer base has already requested an upgrade. We feel this is a strong endorsement of the product's additional features, many of which were directly suggested by our users."

One early adopter couldn't agree more. Marc Durling, Director of Information Technology at the Construction Financial Management Association in New Jersey, stated "ACGI really took the time to listen to user input and incorporate it in the new release. As we put the new release through its paces, we found significant improvements that will have an overall positive impact on the way we run our organization."

Association management professionals can get a first-hand look at Association Anywhere 6.0 by contacting ACGI Software and requesting a demo.
